## THIS MANUAL IS SUPPLIED ELECTRONICALLY.

### COPYRIGHT<sup>(C)</sup>

No part of this publication may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means, electronic, mechanical, magnetic, optical, chemical, manual, or otherwise, without prior written permission of United Process Controls Inc. (UPC-Marathon).

The information contained in this document is STRICTLY CONFIDENTIAL and PROPRIETARY to UPC-Marathon, and shall not be: i) reproduced or disclosed in part or in whole, ii) used for any design or manufacturing of heat treating and/or control equipment, or any other purpose except for that which it is supplied under the terms of the Contract, unless the express written authorization is obtained from UPC-Marathon.

Drawings and photographs included in the documentation are the property of UPC-Marathon, and it is strictly forbidden to reproduce them, transmit them to a third party, or use them for manufacturing and/or design of equipment. Sub-licensing of any technical information contained in this Documentation is strictly forbidden under the terms of the Contract.

UPC-Marathon reserves the right to modify this document without prior notice.

### DISCLAIMER:

The **H2SMART™** or **SGS™** is to be used by the industrial operator under his/her direction. UPC-Marathon is not responsible or liable for any product, process, damage or injury incurred while using the **H2SMART™** or **SGS™**. UPC-Marathon makes no representations or warranties with respect to the contents hereof and specifically disclaims any implied warranties or merchantability or fitness for any purpose.

### TECHNICAL ASSISTANCE

For all questions or concerns regarding the operation of the **H2SMART™** or **SGS™**, please consult the last page of this manual for contact information.

When installing a new analyzer, or swapping an analyzer out with a temporary unit for calibration, the IP address of the analyzer must be set for proper communication with the control system.

### Requirements:

To set up the IP address of an **H2SMART™** or **SGS™** analyzer the following equipment is needed:

1. PC to connect to the analyzer with a network port and user permissions to set the IP address
2. Network cable

### Steps to set the IP address:

1. Determine the IP address of the existing H2Smart and write it down. Depending on the H2Smart version, there are two ways to find the IP:
  - **H2SMART™** Type 1 or 2: Has a single line red display. The IP address is displayed on the display in the startup cycle. Remove and replace the power to reboot the H2Smart, and watch the display.
  - **H2SMART™** Type 3 or **SGS™**: Multi line blue display: The IP address will be displayed on the bottom line of the display.

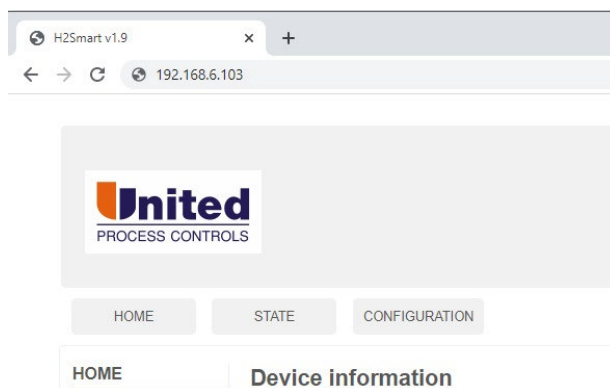

Swap out the old and new analyzer and determine the existing IP address of the new analyzer once it is powered up.

2. Set the IP address on the computer to a static IP address that has the first three numbers the same as the new analyzer, and the last number different. For example, in the photo from step 1, the H2Smart IP address is 192.168.6.103, the computer could be set to

192.168.6.104. For instructions on setting up the the IP address of the PC, contact your IT department or follow instructions from the web.

3. Disconnect the network cable to the H2Smart and connect a network cable directly to the computer.
4. After the IP address is set and the computer is connected:
  - Type 1 and 2 analyzers can be accessed via the required software – Contact a Nitrex or UPC representative for the appropriate software version
  - Type 3 analyzers have a built in web server for configuration and status.
5. Use a web browser to navigate to the IP address of the Type 3 H2Smart to see the status webpage.

6. Log into the analyzer using the username: admin and password: ammonia

7. Click on the Configuration button

The screenshot shows the H2Smart web interface. At the top, there is a header with the United Process Controls logo, the text 'H2Smart ver. 1.9', and a status bar indicating 'LOGGED AS: ADMIN' and 'UPTIME: 656:17:31'. Below the header, there is a navigation bar with buttons for 'HOME', 'STATE', and 'CONFIGURATION'. The 'CONFIGURATION' button is highlighted with a red box. To the left of the main content area, there is a sidebar with a 'CONFIGURATION' section containing buttons for 'TCP/IP', 'ANALOG OUTPUTS', 'DIGITAL I/O', 'DISPLAY', 'REAL TIME CLOCK', 'UNITS', 'FURNACE MODEL', 'BACKUP', and 'FIRMWARE UPDATE'. The 'TCP/IP' button is selected. The main content area displays the 'TCP/IP Protocol Configuration' page. It features a table for 'IP Parameters' with fields for 'IP address', 'Subnet mask', and 'Gateway address'. The 'IP address' field is set to '192.168.3.54', the 'Subnet mask' is '255.255.255.192', and the 'Gateway address' is '192.168.3.1'. There is also a dropdown for 'Expected speed' set to 'Auto-negotiation' and a 'Negotiated' status of '100 Mb/s'. An 'Apply' button is at the bottom of the form. A footer at the bottom of the page reads 'Copyright by United Process Controls Sp. z o.o.'.

8. Set the new network parameters as needed and press Apply.

9. After applying the settings, a confirmation window will pop up prompting a restart of the analyzer.

10. Reboot the analyzer for the new settings to take effect

Note that all IP addresses on a single network must be unique. If IP addresses are duplicated, unintended operations could occur including communication loss, or process problems.
